

Day 1: SQL Coding Challenge – Hospital Database

Question 1: CREATE Table

Scenario: Create a table named Patients with the following fields:
PatientID, PatientName, Age, Gender, AdmissionDate.

Expected Output:

A new table Patients is created successfully.

Question 2: ALTER – Add Column

Scenario: Add a new column DoctorAssigned VARCHAR(50) to the Patients table.

Expected Output:

The Patients table now has an additional column DoctorAssigned.

Question 3: ALTER – Modify Column

Scenario: Increase the length of PatientName from VARCHAR(50) to VARCHAR(100).

Expected Output:

The column PatientName now allows up to 100 characters.

Question 4: RENAME Table

Scenario: Rename the table Patients to Patient_Info.

Expected Output:

The table name is successfully changed to Patient_Info.

Question 5: TRUNCATE vs DROP

Scenario:

At year-end, delete all patient records but keep the table. Later, remove it permanently.

Expected Output:

- TRUNCATE keeps the structure but clears data.
- DROP removes the table completely.
